

R.S. INFOTECH

HR Module Manual

For HR, and for anyone new to the system

Payroll, attendance, leave, statutory returns and the monthly cycle

This manual describes the system as it stands. Where a figure comes from policy — a percentage, a ceiling, a leave allowance — it is HR and the PF consultant who own it, not the software.

What is in this manual

	Section	What it covers
1	Getting in, and what you are looking at	Login, the tabs, phone and desktop
2	The month, start to finish	The order the work actually happens in
3	Employee Master	Adding someone, and the fields that decide their pay
4	Attendance	The codes, and the policies applied for you
5	How pay is worked out	Headings, PF, ESI, PT and what comes off
6	Leave	SL, EL, sandwich days and encashment
7	Loans and advances	Recording one, and changing an EMI
8	Reports	What each one is for and who receives it
9	Generator	Letters, checklists and payroll documents
10	Settings	The six things you can change
11	The automatic emails	What sends, when, and to whom
12	Care and troubleshooting	What to check when a figure looks wrong

1 Getting in, and what you are looking at

The HR app runs in a browser. There is nothing to install and nothing to update — open the address and you have the current version.

Signing in

1. Open the HR address in Safari or Chrome. On an iPhone, use the icon on the home screen if one has been added — it opens the HR app directly.
2. Sign in with your own username and password. Do not share a login: the Activity Log records who changed what, and a shared login makes that record useless.
3. If a screen looks stale after an update, close the app completely and reopen it, or pull down to refresh in the browser.

The tabs

Tab	What you do there
Dashboard	Today at a glance — who is in, who is absent, live tracking, the daily summary, and the shortcuts for loans, advances, document expiry and increment reminders.
Employee Master	The staff records. Add someone, change a salary, record a loan, upload documents.
Attendance Sheet	The month grid. Mark the days, see the policy position for each person.
Salary Sheet	The month's pay, every column, grouped by salary heading.
Reports	Everything you send out or file — statutory returns, consultant reports, leave reports.
Generator	Documents you produce — letters, checklists, the handbook, payroll document filing.
Settings	The few things that are configurable.

On a phone

Every sheet that is a wide table on a laptop becomes a stack of cards on a phone, one card per employee, so nothing needs sideways scrolling. The figures are identical — only the layout changes.

2 The month, start to finish

This is the order the work actually happens in. Everything else in this manual is detail hanging off one of these steps.

Through the month

1. **Mark attendance** on the Attendance Sheet as the days go, or in a batch — whichever suits. Late arrivals and short leaves are counted for you.
2. **Record loans and advances** as they are agreed, from the Dashboard shortcuts or the employee's own record.
3. **Approve leave requests** as engineers raise them.
4. **File payroll documents** — challans and receipts — under Generator → Payroll Documents as they arrive.

At month end

1. **Finish the attendance** for the month. Nothing downstream is right until this is.
2. **Open the Salary Sheet** for the month and read it. This is where a wrong attendance day or a missing increment shows up as a wrong figure.
3. **Check the Consultant Final Summary Report.** It carries the wage register and the PF/ESI/PT totals, in the layout the consultant uses.
4. **Send the consultant what he needs** — the Consultant Report and the Final Summary.
5. **Take the Final Salary Sheet for Accountant** to whoever makes the bank transfer. The last column is the amount to pay.
6. **When his register comes back, compare it** against ours. See section 12.

The emails do some of this for you

On the 2nd of each month the system emails the report pack, the Loan and EMI Report, the Monthly Leave Detail Report, the Consultant Report and the salary advance summary — all for the month just gone. You do not have to generate those by hand. Section 11 lists them.

What to look at first on the Salary Sheet

- **Anyone new** — is their Date of Joining right, and is their first month prorated as you expect?
- **Anyone who left** — are they still on the sheet when they should not be?
- **Leave Days and Policy Half Days** — a surprise here almost always means an attendance day is wrong.
- **Loan EMI and Advance** — do the recoveries match what was agreed?
- **The Grand Total** — compare it against last month. A jump you cannot explain is worth chasing before the money moves.

3 Employee Master

One record per person. Everything about their pay is worked out from this record at the moment it is shown — nothing is stored already-calculated, so correcting a field here corrects every report that reads it.

Adding someone

1. Employee Master → **Add Employee**.
2. Fill the **Basic details**: name, employee code, designation, date of birth, **Date of Joining**, mobile, email.
3. Set the **Sequence No.** — the position this person holds in every report. Give them a number somebody already has and everyone from there down shifts one place.
4. Choose the **Salary Heading** and enter the **Rate of Pay**. See section 5 — the heading decides the Basic/HRA/LTA split and which deductions apply at all.
5. Choose the **Employee Type**: Field, Office, Work From Home or Resident. This is separate from the heading and decides the leave rules.
6. Answer the **PF and ESI** questions: eligibility, contribution type, prior UAN, Form 11, disability, already-covered.
7. Enter **bank details** — name, account number, IFSC. The accountant's sheet is built from these.
8. Add **opening leave balances** (EL and SL) and the date they apply from.
9. Upload **documents** in the Documents section. They go to Drive; the record keeps the link.
10. **Save**. A message confirms what was written.

Rate of Pay is the gross, not take-home

It is the figure everything else is derived from. Statutory deductions come out of it; the employer's contributions sit on top of it. If you enter what somebody actually receives in the bank, every figure in the system will be wrong.

Changing a salary

Use **Record Increment** on the employee's record rather than editing Rate of Pay directly. An increment is dated, so past months keep the old rate and only months from the effective date carry the new one. Editing the rate in place would rewrite history.

When somebody leaves

Set their employment status to left and enter the leaving date. They stay on reports for the months they worked and drop off after. Use the Joining/Exit checklist in the Generator so nothing is missed.

4 Attendance

The Attendance Sheet is a grid: employees down the side, days of the month across. Pick the month, click a day, choose a code.

The codes

Code	Means	Effect on pay
P	Present	Paid in full
EL	Earned leave (privilege leave)	Paid, comes off the EL balance
SL	Sick leave	Paid, comes off the SL balance. Needs a medical certificate
HEL	Half day earned leave	Half present, half EL
HSL	Half day sick leave	Half present, half SL
HLP	Half day leave without pay	Half present, half unpaid
A	Absent	Unpaid
LP	Leave without pay	Unpaid
H	Week off or declared holiday	Paid, not a working day. Counts towards EL
SHORT	Short leave	Counted as present; three a month are free, past that see below

What the system applies for you

- **Late coming.** Fifteen minutes' grace, then three free instances a month. Past that each late arrival is judged by its own instance number: the 4th is a warning with no deduction, the 5th costs half a day, the 6th another warning, and the 7th — and every one after — costs a full day.
- **Sandwich leave.** A Sunday or declared holiday is charged as an extra unpaid day when the working day immediately before and the working day immediately after are both Absent or Leave Without Pay. Approved leave on either side does not trigger it. A run of adjacent non-working days is judged as one block.
- **Resident Engineers are outside all of it** — leave, short leave, late coming and overtime rules do not apply to them.

Finish the month before you read the Salary Sheet

An unmarked past day counts as absent. That is deliberate — it stops a forgotten day being silently paid — but it means a half-marked month reads as though people were away.

Bulk marking

Settings → **Always mark Present — bulk apply** fills a whole month as Present for the staff you choose, so you only edit the exceptions. Saves are batched: one write for the whole sheet, not one per cell.

5 How pay is worked out

The salary heading decides two things at once: how Rate of Pay splits into Basic, HRA and LTA, and which statutory deductions apply at all.

Heading	Basic	HRA	LTA	PF	ESI	PT
Managerial Staff	65%	35%	—	Yes	Yes	Yes
Seniors Staff	50%	40%	10%	Yes	Yes	Yes
Junior Staff	100% flat	—	—	Yes	Yes	Yes
Apprentices	50%	40%	10%	—	—	—
R.S.IT Solution	50%	40%	10%	—	—	Yes
Contractors	50%	40%	10%	—	—	—

The explanatory text on screen is generated from this same table, so it always matches what was actually applied.

The statutory deductions

Provident Fund. 12% from the employee and 12% from the employer, on **Basic only**. The employer's share splits into Pension (EPS, 8.33%, capped at ₹1,250) and EPF. Administration charges of 0.5% and EDLI of 0.5% sit on top. EPFO caps the PF wage at ₹15,000 a month, so anyone whose Basic is above that contributes on ₹15,000 unless they are one of the agreed exceptions. Marking somebody not eligible means no PF at all, whatever the wage.

ESI. 0.75% from the employee and 3.25% from the employer, and it stops strictly above ₹21,000 gross (₹25,000 for a person with a disability). Once covered, coverage continues to the end of the half-yearly contribution period — April to September, or October to March — even if the wage rises above the ceiling mid-period. Each member's share is rounded up to the next rupee, which is what ESIC requires.

Professional Tax. A flat ₹200 a month once gross is above ₹12,000, capped at ₹2,500 in a year.

What else comes off

- **Loan EMI** — whatever is in force for that month.
- **Advance** and **Temporary Advance** recoveries.
- **Retention**, where one applies.
- **Leave amount** — the value of unpaid days.

And what sits outside

Conveyance expense is reimbursed on top of salary. It carries no PF, ESI or PT, and it is deliberately not on the wage register the consultant files. It is paid, and it appears on the Salary Sheet, the payslip and the accountant's sheet.

Diwali bonus is the amount you enter and nothing else. Nothing is ever deducted from it — no PF, no ESI, no PT, no advance, no retention, no leave. Leave it blank and the person does not appear on the bonus payment sheet.

Every amount is whole rupees

No paise, anywhere. Totals are the sum of the rounded figures printed above them, so a column always adds up to what you can see — which is what a PF or ESI challan has to match.

6 Leave

	Rule
Sick leave	7 days a year, or 4 for Work From Home. Not carried forward. A medical certificate is required.
Earned leave	One day per 25 qualifying present days, as a running total across the whole financial year — it does not start again each month, and it is not rounded down. 28 qualifying days earns 1.12 days, and the remainder keeps accruing. Not carried forward: what is earned in one year becomes next year's opening balance.
A qualifying day	A day present (short leave included), a day of EL or SL, and a Sunday or declared holiday the employee was in service for, each count 1. A half-day code counts 0.5. Unpaid absence, an unmarked day and a sandwiched day count nothing — what payroll does not pay for does not earn leave.
Encashment	Earned leave is encashable at 70% of Basic + HRA, a day being a twenty-fifth of that.
Resident Engineers	Outside the leave scheme entirely. Their leave columns read NA.

Where to look

- **EL SL Current Status** — where everybody stands right now.
- **Monthly Leave Detail Report** — late coming, EL/PL, SL, half days and short leave, broken out.
- **Yearly Total Leave Report** — the year in one page.
- **Leave Encashment Report (Generator)** — what the pending balance is worth.
- **Leave Balance Next Year** — what carries into the coming financial year.

The financial year

1 April to 31 March. FY 2026-27 runs 1 April 2026 to 31 March 2027. Every year-scoped figure in the system — leave, PT cap, attendance storage — uses this, not the calendar year.

7 Loans and advances

Both can be recorded from the Dashboard shortcuts — **Employee Loan & EMI** and **Salary Advance Payment** — or from the employee's own record.

Recording a loan

1. Dashboard → **Employee Loan & EMI**.
2. Choose the employee. Any existing loans are listed with their current EMI and outstanding balance.
3. Enter the loan amount, the monthly EMI and the month recovery starts from.
4. Save. From that month on the EMI comes off the salary automatically and the balance reduces each month until it clears.

Changing an EMI partway through

Use the **Change EMI** control on the loan itself. Give the month the new EMI starts from and the new amount. Months before that keep the old rate, so past payroll is untouched; the remaining

balance is recalculated automatically. Both the old and new EMI stay in the loan's history. The loan is never deleted and recreated.

A new EMI can only start this month or later

The system refuses a past month deliberately. Changing an EMI backwards would alter payroll that has already been paid and filed.

8 Reports

Every report is generated for a month you choose, can be printed or shared, and files a copy to Drive under HR Management → the financial year → Reports.

For the PF consultant

Report	What it is
Consultant Report	One row per employee: attendance days, leave, gross, loan and advance. This is what he works from.
Consultant Final Summary Report	The wage register in his own column order, then the PF, ESI, allowance and deduction totals. Built so you can read it against the register he sends back, row for row.
PF Report	The PF return — every account, per member and in total.
ESI Report	The ESI return.
PT Report	Professional tax. Covers R.S.IT Solution as well as the core three headings, because PT applies to them.

For payment

Report	What it is
Final Salary Sheet for Accountant	Grouped by heading, sorted by bank, with account number and IFSC. The last column is the amount to transfer. In a month somebody draws conveyance it splits into Payable Salary and Conveyance Expense as well.
Diwali Bonus Payment Sheet	The bonus payment list, same shape.

For management

Report	What it is
Salary Report Net for Employer	Salary at full attendance — no leave, absence or LOP applied. Loan, advance and retention are deducted.
Month-wise Salary Comparison	This month against last, with every reason for the gap named, and the reasons adding back up to the difference.
Cost to Company Report	What each person costs including the employer side.
Increment Report / Increment Reminders	Who is due, and what was given.
Loan & Advance Report	Outstanding balances and recoveries.
Employee Wise Detail Report	One person, everything.
Overtime Report	Overtime minutes by employee.
Employee Contact / Insurance / Assets / Birthday	Reference lists.

9 Generator

Where documents are produced rather than calculated.

Section	What it does
Letters	Offer, appointment, confirmation, experience, relieving and the rest, on the company letterhead, filled from the employee record.
Checklists	Joining and exit checklists, so nothing is missed either end.
Payroll Documents (monthly)	Where PF, ESI and PT challans and receipts, the wage register and payslips are filed, by financial year and month. Browse, search and see at a glance which month is incomplete.
Employee Role Reports	Role and responsibility profiles by department.
Holiday List	Generate one, or upload the signed copy.
Leave Encashment Report	What pending leave is worth.
Company Letterhead / R.S. Infotech Profile	The letterhead, logo, signatory, PF and ESI code numbers used across every report.
Apprentice Documents	Apprentice claim paperwork.
Uniform & ID List, Employee Handbook, Important Documents	Reference material.
CTC Calculator, Rate of Pay Calculator	Work backwards from a CTC or a take-home figure to a Rate of Pay, using the same rules payroll uses.

10 Settings

Setting	What it is for
1 Expense rate	The per-kilometre rate for the engineers' travel claims.
2 Geofence zones	The site boundaries live tracking checks against.
3 Document storage	Moves documents held inside old employee records out to Drive. Run once if prompted.
4 Always mark Present — bulk apply	Fills a month as Present for the staff you choose, so you only edit the exceptions.
5 Backend connection	Checks this device can actually read and write to the Google Sheet. The first thing to try when saving fails.
6 Employee sequence	Gives the whole roster a clean 1, 2, 3 in the order it is listed now. Individual numbers are then set on each employee's own record.

11 The automatic emails

These send on their own. You do not have to generate them.

Email	When
Daily HR Digest	Every day
Birthday reminder	The day before
Salary advance taken	The same evening, and only on a day somebody actually took one
Report pack	2nd of the month, for the month just gone
Loan and EMI Report	2nd of the month
Monthly Leave Detail Report	2nd of the month
Consultant Report	2nd of the month
Salary advances for last month	2nd of the month
Increments due this month	2nd of the month

Attachments are Excel files with the columns already sized. The salary-advance alert is silent on a day nothing happened, deliberately — a daily "nothing to report" would train you to stop reading it.

12 Care and troubleshooting

When a figure looks wrong

1. **Check the attendance first.** Most surprises on a Salary Sheet are an attendance day, not a calculation.
2. **Check the Date of Joining and the leaving date.** A wrong date prorates a whole month.
3. **Check the salary heading and Rate of Pay,** and whether an increment was recorded with the right effective month.
4. **Check PF and ESI eligibility** on the employee record. "Not eligible" means nil, whatever the wage.
5. **Open the calculation card** on the Salary Sheet. It explains, in words, how that person's figure was reached.

Comparing against the consultant's register

- Open the **Consultant Final Summary Report** for the month and put his register beside it. Same column order, so you can read down.
- **Sort both by name first** — his register runs in his order, ours in your sequence order.
- **Compare his grand total against ours first.** If gross, deductions and net all match, there is nothing to hunt for.
- **A matching total does not mean the rows match.** An amount charged to the wrong person cancels out in the total. Read down the Net Salary column even when the totals agree.

Things worth being careful about

- **Never edit Rate of Pay to give an increment.** Use Record Increment, so past months keep the old rate.

- **Do not enter take-home as Rate of Pay.** It is the gross.
- **Finish the attendance before reading the Salary Sheet.** Unmarked past days count as absent.
- **Every person gets their own login.** The Activity Log is only as useful as that.
- **A policy figure is not the software's to change.** Percentages, ceilings and leave allowances come from HR and the PF consultant. If a number looks wrong, ask them before assuming the system is at fault.

If something will not save

1. Settings → **Backend connection** → run the check. It tells you whether this device can reach the Google Sheet.
2. If the check fails, it is the connection, not your data. Try again on a different network.
3. If the check passes and saving still fails, note exactly what you were doing and pass it on.

Where everything is filed

Google Drive, under **HR Management** → the financial year → Dashboard or Reports → the report name. Every report you generate files a copy there automatically, so a month you have already run can be retrieved without regenerating it.
